

Level 1 Inspection

This inspection level is utilized when verification of the usability of the chimney or flue for continued services, under the same conditions and with the same similar appliances is needed. This is done if these areas are readily accessible (i.e., annual inspections, during routine cleanings)

Level 2 Inspection

This level utilizes Level 1 inspection, but is also required in the following instances:

- * Upon sale or transfer of property
- * Prior to relining or replacement of the flue lining
- * Replacement of dissimilar appliances
- * After a building or chimney fire, other weather or seismic events

We offer a full chimney scan of the interior of the chimney venting area.

Level 3 Inspection

This level is utilized for concealed areas where Levels 1 & 2 inspections do not properly evaluate suspected areas.
